## 1. Introduction

QuestWorlds is a roleplaying rules engine suitable for you to play in any genre. It features an abstract, conflict-based, resolution method and scalable, customizable, character descriptions. Designed to emulate the way characters in fiction face and overcome challenges, it is suitable for a wide variety of genres and play styles.

### 1.1 Why QuestWorlds?

QuestWorlds is meant to facilitate your creativity, and then to get out of your way.

It is well suited to a collaborative, friendly group with a high degree of trust in each other's creativity. Characters in QuestWorlds are described more in terms of their place in your imagination and the game setting than by game mechanics.

If your group are often at odds and rely on their chosen rules kit as an arbiter between competing visions of how the game ought to develop, or use mechanical

options to decide “what action to take,” QuestWorlds is not a rules set that provides that structure. Make sure to discuss with your group whether you are collectively on board with trying a new play style dynamic, or if you would rather stick to more structured systems.

## 1.2 Version

The first version of these rules Hero Wars was published in 2000 (ISBN 978-1-929052-01-1)

The second version HeroQuest was published in 2003 (ISBN 978-1-929052-12-7). We refer to this as HeroQuest 1e to disambiguate.

The third version HeroQuest: Core Rules was published in 2009 (ISBN 978-0-977785-32-2). We refer to this as HeroQuest 2e.

HeroQuest Glorantha was published in 2015 (ISBN 978-1-943223-01-5). It is the version of the rules in HeroQuest 2e, presented for playing in Glorantha. We refer to this as HeroQuest 2.1e.

QuestWorlds was published as a System Reference Document (SRD) (this document) in 2018. The version of the rules here is slightly updated, mainly to clarify ambiguities, from the version presented in HeroQuest 2e and HeroQuest 2.1e. This makes this ruleset HeroQuest 2.2e, despite the name change. However, to simplify we identify this version as QuestWorlds 1e.

An Appendix lists changes in this version. As the SRD is updated we will continue to track version changes there.

## 1.3 Basic & Advanced Mechanics

As the QuestWorlds engine is oriented towards rules-light play, we designate some mechanics as “Basic” and others as “Advanced.”

Basic rules represent the minimum mechanical structure you need to play a game with the feel of QuestWorlds, while advanced rules add mechanical depth to areas of play which you might wish to emphasize, though possibly at a cost in speed of play.

In this document, we put advanced mechanics in their own section from the relevant basic mechanic section.

The advanced mechanics can be added to play individually; you do not have to bring them in together. In cases where an optional mechanic depends upon or interrelates with another optional mechanic, we note that in the text.

If this is your first time reading these rules, you may wish to skip over these sections. Return to them once you understand the basic mechanics. Similarly,

if this is your first time playing these rules, you may wish to omit the advanced rules at first, getting a feel for the game in its simplest form, and then add them in as you want more depth. Your GM may even decide to employ certain advanced rules on a case by case basis, providing more detail or nuance to particularly interesting conflicts where beneficial, while otherwise taking a lighter approach.

## **Who Is This Document For?**

The primary audience for this document is game-designers who wish to utilize the QuestWorlds rules framework to implement their own game.

We also recognize that some people will use this document to learn about the QuestWorlds system before purchasing it, and some players in games where the GM has a rule book, may use this as a reference to help understand the rules.

For that latter reason, we address the rules here to a player.

However, this remains a technical document with few examples, advice, or other non-rules text to help you play your game, as such are beyond the scope of this System Reference Document.

It is expected that the designers of games you play based on these rules will include such guidance and context as is relevant to their game's particular genre or setting, presented in a format better suited for learning how to play.

## **1.4 Numbering**

Sections within this document are numbered. This is for the benefit of game designers and reviewers.

This does not imply that game designers need number the rules in their own games.

Numbering however makes it easy to refer to rules in this document when page numbers may vary by presentation format for the purposes of error trapping or tracking changes. If you need to give us feedback about this document, that will assist us.

## **1.5 Participants**

### **1.5.1 Players**

You and your fellow players each create a Player Character (PC) to be the “avatar” or “persona” whose role you will play in the game. The PCs pursue

various goals in an imaginary world, using their abilities, motivations, connections, and more to solve problems and overcome obstacles that stand in their way.

When we say ‘you’ in this document we may mean the player or their PC. Which should be clear from context, or explicitly noted.

### **1.5.2 Game Master**

Your Game Master (GM) is the interface between your imagination and the game-world in which the PCs have their adventures; describing the people, places, creatures, objects, and events therein. Your GM also plays the role of any Non-Player Characters (NPCs) with whom your PC interacts in the course of your adventures.

We generally refer to the GM as ‘your GM’ in this document’s player-facing language. However, if you are the GM for a given game, this naturally refers to you.

## **2. Mechanics**

In a QuestWorlds game, stories develop dynamically as you and your GM work together to role-play the dramatic conflict between your group’s PCs using their abilities in pursuit of their goals and the obstacles, challenges, or threats that your GM presents to stand in your way.

Over the course of play, your GM will present various plot obstacles as conflicts to the PCs, resulting in either victory or defeat for your character. These conflicts can represent any sort of challenge you might face: fighting, a trial or debate, survival in a harsh environment, out-wooing rival suitors, and so on.

Rather than mechanically addressing the individual tasks that make up these conflicts, QuestWorlds usually assesses your overall victory or defeat in a single contest where you and your GM make an opposed roll pitting your characters ability vs the resistance the obstacle presents to you achieving your goal.

Whenever the GM presents an obstacle for you to overcome, you should ‘frame the contest’ by describing what you are trying to accomplish, and which of your abilities (see below) you want to use to achieve that goal, and how.

Based on that framing and other factors, your GM will asses what resistance the characters face.

You roll a twenty-sided die (D20) against your PC’s ability, and your GM rolls a D20 against the resistance. Your GM assesses your overall victory or defeat in the contest based on the success or failure of both rolls, and narrates the

results of your attempt to overcome the obstacle accordingly. The direction of the story changes, in either a big or small way.

We encourage your GM to work with your suggestions when narrating the victory or defeat, but the final decision rests with them.

## 2.1 Abilities

Characters in QuestWorlds are defined by the abilities they use to face the challenges that arise in the course of their story. Rather than having a standard list of attributes, skills, powers, etc. for all characters, anything that you can apply to solve a problem or overcome an obstacle could be an one of your abilities. While your GM may provide some example abilities to chose from that connect your PC to a particular story or game world (whether created by your GM or by the designer of a particular game), you get to make-up and describe most or all of your abilities.

Some abilities might be broad descriptions of your background or expertise, like “Dwarf of the Chalk Hills” or “Private Detective” - implying a variety of related capabilities. Others might represent specific capabilities or assets such as “Lore of the Ancients,” “Captain of the Fencing Team,” or “The Jade Eye Medallion.”

Ultimately, abilities are just names for the interesting things your character can do.

### 2.1.2 Ratings and Masteries

QuestWorlds abilities are rated on a range of 1–20, representing the target number you need to roll or less to succeed on your roll during a contest (see §2.3 for more details). Ratings are also scalable beyond that range using tiers of capability we refer to as “Mastery.” When you raise a rating of 20 by one point, either permanently through character advancement or a temporarily with modifier to a contest roll, the rating increases not to 21, but to 1M. The “M” after the rating signifies mastery. You have now reached a new order of excellence in that ability, such that your die rolls will almost always succeed. Unless opposed by similarly exalted resistance (see §2.3.5.2 for more details) the number in front of the M is now the target number you seek to roll or less to achieve a critical success!

As an ability rating climbs, you may even gain multiple masteries in it. Mastery tiers above one (representing an overall rating of 41 or more) are marked with a number to the right of the M symbol. Each successive rating increase over 20 becomes a new mastery tier. Thus, if you have 10M2, you have two masteries (representing a total rating of 50, 10+20+20). 10M3 means that you have three masteries, and so on.

Specific QuestWorlds games or genre packs may use other symbols relevant to their setting or genre to denote mastery instead of M. If so, this should be clearly noted by their designers.

In summary, to reflect abilities (or resistances), higher than 20, you divide the ability by 20, noting a mastery for each multiple of 20 the ability exceeds, and treating the remainder as the target number. So an ability of 27 translates into 1 remainder 7 or 7M; an ability of 43 translates into 2 remainder 3 or 3M2.

You may sometimes be faced with an obstacle for which you have no relevant ability whatsoever. In such cases, you may still enter into conflict with the obstacle using a minimum base target number of 6 for your contest roll. Like ability ratings, it may also be subject to modifiers.

While QuestWorlds generally treats ability ratings as abstract measures of problem solving power rather than quantitative measures of in-fiction traits, some games may also depart from this practice in order to more closely couple key fictional elements to the mechanics. For example, a magic system might classify certain supernatural effects as Apprentice, Journeyman, or Master level, and require ability ratings of 15, 5M, or 1M2 (respectively) in a relevant ability to even attempt them.

Such departures from abstraction should generally only be made where the increased complexity they bring leads to rewarding choices in a key area of interest to the setting or genre at hand. In most cases, you and your GM can simply follow the fiction surrounding your ability and its context within the setting for guidance as to what applications of the ability are credible.

## 2.2 Hero Points

You start the game with a pool of 3 hero points, and gain three more of them at the beginning of every session. These are a precious resource, as they are used both to boost your contest results, and to improve your abilities over the long term.

Any Hero Points not spent on boosting contest results or improving your character do not carry over to the next session.

## 2.3 Contest Procedure

You choose an ability relevant to the conflict at hand, describe exactly what you are trying to accomplish, and how. Your GM may modify these suggested actions to better fit the fictional circumstances, and describe the actions of the NPCs or forces on the other side of the conflict.

### **2.3.1 Resolution Methods**

The Basic resolution methods are as follows:

#### **2.3.1.1 Automatic Victory**

Sometimes, your GM may not call for a contest at all, in which case you are simply victorious in overcoming the obstacle at hand. This may be because defeat in the conflict to overcome the obstacle would lead to uninteresting results or a narrative dead-end, such as when finding an important clue is essential to the progress of an adventure.

Your GM might also do this in cases where, within the fictional context, the particular ability you have brought to bear on the obstacle is such that overcoming the obstacle should be a trivial matter under normal circumstances (e.g. - a professional hunter bringing in the evening meal in a forest filled with game animals). In such cases, defeat would simply not be credible unless your GM wanted to introduce some further complications to the story. Generally, your GM will only use Automatic Victory when you have a relevant ability to justify its application.

For cases where overall victory may be a given, but the degree, timeliness, or cost of that victory may be interesting concerns, consider the Advanced rules in §4.12.

#### **2.3.1.2 Simple Contest**

The simple contest QuestWorlds's primary resolution mechanic for overcoming story obstacles, and is used the most often. It also provides the foundation for other types of contests, including several Advanced ones. As such, it receives both an overview of key concepts here as well as a more detailed treatment in §5.

At its most basic, a simple contest can be summarized as follows:

1. You and your GM agree upon the terms of the contest.
2. You roll a D20 vs your relevant ability, while your GM rolls a D20 vs the contest's resistance.
3. Your GM compares the success or failure of the two rolls, and assesses your overall victory or defeat.
4. Your GM then narrates the outcome of the conflict as appropriate.

If you enter into conflict with another player rather than an obstacle presented by your GM, you both roll your relevant abilities for the contest instead of against a GM-set resistance, and your GM interprets the results, as described above.

## 2.3.2 Framing the Contest

### 2.3.2.1 Framing the Contest

When a conflict arises during the game, you and your GM start by clearly agreeing on:

- What goal you are trying to achieve.
- What the obstacle is you are trying to overcome
- What tactics you are using to and overcome it.

This process is called ‘Framing the Contest’.

### 2.3.2.2 Conflict: Goals vs Obstacles

Contests in QuestWorlds don’t simply tell you how well you performed at a particular task: they tell you whether or not you overcame a story obstacle, which moves the story in a new direction. Unlike some other role-playing games, a contest in QuestWorlds does not resolve a task, it resolves the whole obstacle.

If you need secret records which are stored in a vault within a government compound, your goal is to get the information - while the fact that it is secured against your access is an obstacle you must overcome to attain that goal. Overcoming that obstacle may involve many possible tasks, evading guards, lock-picking, forging credentials, etc. - but the contest doesn’t address those individually. The contest is framed around the entire conflict against the obstacle as a whole.

In a fight, your obstacle may be the opponents themselves, who you are fighting to capture or kill. Just as often you are seeking another goal and you might just as easily attain it by incapacitating or evading your foes. In this case, beating the enemy is a task, not the obstacle. For example, if an ally has been accused of treason by the King, your goal could be to prove the ally’s innocence. The power of the King threatening your ally is an obstacle to be overcome, and a trial by combat could be a contest to resolve the conflict with an ability like “Knight Errant.”

In a court trial, your goal is likely a particular verdict, while the obstacle might be the opposing lawyer, an unjust law, or even the justice system itself. In this case, jury selection, a closing argument, revelatory evidence, or legal procedural challenges are tasks, not the entire obstacle. The overall conflict encompasses all those things.

A conflict to overcome obstacle moves the story forward when it is resolved. If it is merely a step toward resolving an obstacle it is a task and not a conflict. While those component tasks may be interesting parts of narrating tactics and results, your GM should be sure to look for the story obstacle in conflict when framing a contest.

If there is no story obstacle to your actions, your GM should not call for a contest but simply let you narrate what you do, provided that seems credible.

For example, you are traveling from one star system to another. In the next star system you hope to confront the aged rebel who holds long-forgotten secrets that could bring freedom to the galaxy. Your GM feels there is no useful story obstacle for you to contest against, and so lets you describe heading down to the spaceport to secure a ship, meeting the captain and crew of your vessel, and traveling to the next world. Your GM encourages you to summarize what happens quickly so you can get to the meeting with the old rebel. Your GM knows that will be the real story obstacle, convincing the old rebel to part with his secrets.

### **2.3.2.2 Tactics**

You either choose an ability that represents any ‘key moment’ in overcoming that obstacle, or a broad ability that lets you overcome the whole obstacle. We call this ‘choosing a tactic’.

Your tactic might describe your using ability that helps you overcome a task within the obstacle: sneaking past the guards, picking the locks, choosing the right jury or skewering your opponent with your foil. Or, your tactic might describe using a broad ability like ‘Ninja’, or ‘Lawyer’ or ‘Fencer’ to overcome all those challenges that might form part of the obstacle. Either way, if you succeed at that roll, you overcome the whole obstacle. Or by failing at that roll, you fail to overcome the obstacle, not just fail at one task.

When deciding on your tactic, focus on how your unique abilities would help you overcome the obstacle. This as the ‘key moment’ where we focus on your PC. Use this moment to reveal your PC’s strengths to the group.

Your GM will determine if your tactic passes a ‘credibility test’. If you try to jump a 100 meters or run faster than a speeding car, your action is not credible and your GM will ask you to choose a different tactic.

Credibility depends on the genre, as what is not credible in a gritty police procedural might be in pulp where you might be able to leap from a bridge onto a speeding train. If in dispute, your GM should discuss with the group whether they consider your tactic credible for the genre.

Extraordinary abilities in some genres give you the ability to do the incredible. For example in a superhero genre you might fly or be invulnerable to bullets, in a fantasy genre hurl magical lightning bolts. A genre pack for the game should help define what incredible tactics are allowed for that game as part of an ‘Extraordinary Powers Framework’.

The GM can narrate the remaining tasks that make sense of the story depending on your success with that roll, or have them occur ‘off-stage’ for speed. Think

of the way TV or Cinema often cuts to the key moment of drama in a break-in, over showing us the whole heist from beginning to end.

#### **2.3.2.1 No Repeat Attempts**

A contest represents all of your attempts to overcome an obstacle. If you lose it means that no matter how many times you tried to solve the problem, you finally had to give up. You can try again only if you use a new tactic to overcome the obstacle.

#### **2.3.3 Resistance**

Your GM chooses a Resistance to represent the difficulty of the obstacle.

When setting resistances it is important to understand that whilst traditional roleplaying games simulate an imaginary reality, QuestWorlds emulates the techniques of fictional storytelling.

Understanding this distinction will help you to play the game in a natural, seamless manner.

For example, let's say that your GM is playing a game inspired by fast-paced, non-fantastic, martial arts movies in a contemporary setting. You are running along a bridge, pacing a hovercraft, piloted by the main bad guy. You want your character, Joey Chun, to jump onto the hovercraft and punch the villain's lights out.

In a traditional, simulative game, your GM would determine how hard this is based on the physical constraints you've already described. In doing so, they would come up with imaginary numbers and measurements. Your GM would have to work out how the distance between bridge and hovercraft. Depending on the rules set, they might take into account your relative speeds to the vehicle. Then they would use whatever resolution mechanic the rules provide them with to see if Joey succeeds or fails. If you blow it, your GM will probably consult the falling rules to see how badly you injure yourself (if you land poorly), or the drowning rules, if you end up in the river.

In QuestWorlds, your GM starts not with the physical details, but with the proposed action's position in the storyline. They consider a range of narrative factors, from how entertaining it would be for you to succeed, how much failure would slow the pacing of the current sequence, and how long it has been since you last scored a thrilling victory. If, after this, they need further reference points, your GM can draw inspiration more from martial arts movies than the physics of real-life jumps from bridges onto moving hovercrafts. Having decided how difficult the task ought to be dramatically, your GM will then supply the physical details as color, to justify their choice and create suspension of disbelief, the illusion of authenticity that makes us accept fictional incidents as credible

on their own terms. If they want Joey to have a high chance of success, your GM describes the distance between bridge and vehicle as impressive (so it feels exciting if you make it) but not insurmountable (so it seems believable if you make it.)

In other words, in Quest Worlds your GM will pick a resistance based on dramatic needs and then justify it by adding details into the story.

Resistance numbers are derived from a base number, which is modified according to the resistance class, as per the following table:

#### RESISTANCE CLASS TABLE

Class	Value
Nearly Impossible	Base +M2
Very High	Base +M
High	Base +6
Moderate	Base
Low	Base -6
Very Low	Base -M or 6, whichever is lower

By default, the base starts at 14.

All contests use the base number + resistance class, except for contests to determine augments.

Augmenting always faces a Moderate resistance, this is always the unmodified base value.

#### 2.3.4 Die Rolls

To determine how well you use an ability, roll a 20-sided die (d20). At the same time, your GM rolls for the resistance.

Compare your rolled number with the TN to determine the level of success or failure.

- Critical: If the die roll is 1 (even when the TN is 1), you succeed so brilliantly that your GM may reward them with an extra, unexpected effect.
- Success: If the die roll is greater than 1 and less than or equal to the TN, you succeed, but there is nothing remarkable about the success.
- Failure: If the die roll is greater than the TN but not 20, you fail. Things do not happen as hoped.

- **Fumble:** If the die roll is 20, you fumble (even when the TN is 20). This is the worst result possible, and you will suffer a disturbing or entertaining catastrophe.

### **2.3.5 Victory or Defeat**

Your degree of success or failure and your GM's rolls are compared.

If you have a better result than the GM, then you have a victory and you gain the prize set out when the contest was framed.

If you have a worse result, then you are defeated and do not gain the prize.

If you both have the same level success or failure, the better roll wins.

if your rolls tie, then it is a standoff.

Your GM describes what happens, based on their interpretation of the results.

#### **2.3.5.1 Better Roll**

QuestWorlds supports two options for the 'better roll': the highest roll, or the lowest roll. Some groups prefer lowest roll, some higher. The preference toward 'low is better', is often because because 1 is a critical and 20 a fumble, and toward 'high is better' because the winner has rolled a higher number. Groups wanting higher abilities to win out slightly more often should use higher roll.

#### **2.3.5.1 Confusing Ties**

Your GM will describe most tied results as inconclusive standoffs, in which neither of you gets what you wanted.

In some situations, ties become difficult to visualize. Chief among these are contests with binary outcomes, where only two possible results are conceivable.

Your GM can either change the situation on such a tie, introducing a new element that likely renders the original prize irrelevant to both participants, or they can resolve the ties in your favor.

#### **2.3.5.2 Bumps**

A bump affects the degree of success or failure of your die roll. A bump up improves your result by one step, changing a fumble to a failure, a failure to a success, or a success to a critical. Bump ups come from two sources: masteries and hero points (applied in that order). A bump down reduces the degree of success of your opponent. Bump downs come from one source: masteries.

### **2.3.5.3 Bump Up with Mastery**

If you're engaged in a contest against a resistance, and you have an ability of 10M versus a resistance of 10, you enjoy an advantage. You get a bump to your die roll from that mastery.

You get one bump up for each level of mastery your PC has greater than your opponent's. So against a resistance of 14 a PC's ability of 7M is treated as 7 vs. 14 but we bump the result one step in the the favor of the PC; a PC's ability of 3M2 is treated as 3 vs. 14 but we bump the result two steps in the the favor of the the PC.

This reflects the fact that an ability above 20 would always succeed on a D20. Because each mastery represents automatic success (apart from a fumble) on a D20, you roll against the remainder, and treat the mastery as a bump. So on an ability of 27 is 7M, which means a target number of 7 and bump the result; an ability of 43 means 3M2 or a target number of 3 and bump the result twice.

Opposed masteries cancel out, each contestant reducing their rating by the same number of masteries until only one or neither of them has masteries. If you have two masteries, then you enjoy the same great advantage over an opponent with a single mastery as a someone with one mastery has over an opponent with no masteries. If you have an advantage of two or more masteries over an opponent, you can pretty much count on pounding him into the dust.

This allows QuestWorlds to represent large differences in ability or resistance.

### **2.3.5.4 Bump Up with Hero Points**

You can spend a hero point to bump up any result by one step. You may only bump your own rolls, not those of other PCs or supporting characters—with the exception of sidekicks and retainers, which, as extensions of your character, you may spend hero points on. You can decide to use a hero point for a bump after the die roll results are calculated (including any bump ups resulting from masteries).

You can only spend one hero point per roll.

## **2.4 Augments**

An augment is a bonus you get to your target number as a result of a prior contest. This can be either a contest you took part in, or one performed by someone else, most likely another PC. Unlike the Advanced rule 'Benefit of Victory' (see below), which is a side effect of a contest conducted for another reason, an augment contest is conducted for the sole purpose of gaining a bonus.

To grant an augment to yourself, or another PC, in an upcoming contest, you engage in a simple contest against a Moderate resistance. You frames the contest,

making it clear how your action will assist.

In order to work, an augment attempt must be **entertaining** and **memorable**. Don't just hunt for mechanical advantage, show us more about your PC when you augment, their attitudes, passions, or lesser known abilities. Your GM decides if the augment is justified and can refuse boring and uninspired attempts to augment, where you are just looking for a bonus to your roll and not adding to the story.

#### AUGMENT RESULTS TABLE

Contest Outcome	Bonus
Complete Victory	+M
Major Victory	+9
Minor Victory	+6
Marginal Victory	+3
Marginal Defeat	0
Minor Defeat	+0
Major Defeat	+0
Complete Defeat	-3

You get only one chance to receive an augment on any given contest. Failure does not allow other augment attempts.

Augments can, however, combine with other modifiers, including those from benefits of victory and from plot augments.

It is impossible to augment an augment roll.

Augments last for the duration of a single contest, whether simple or long.

##### 2.4.1 Quick Augments

Although you may enjoy the uncertainty of rolling, your GM may choose to run their game with calculated augments: divide the augmenting ability by 5 and round up.

##### 2.4.2 Plot Augments

A plot augment is earned when you overcome a particular plot obstacle created by your GM. The magnitude of the plot augment is +3, +6, +9, or +M. The more challenging the plot obstacle, the higher the augment.

## 2.5 Armor and Weapons, Possessions and Equipment

QuestWorlds models arms and armor like it does everything else: any piece of gear, if sufficiently important to even mention, is treated as an ability you can use to solve a problem.

The degree to which you can overcome obstacles with your armor and weapons depends not on any qualities inherent to the objects themselves, but to the points you have allocated to your ability.

The difference between types of armor or weapons lies in the types of actions you can describe, and what you can accomplish in unrelated actions and unusual contests.

Similarly, QuestWorlds treats your possessions and equipment like it does everything else: as abilities you can use to solve problems, or to augment other abilities, which you then use to solve problems.

Armor and Weapons, Possessions and Equipment can be a common source of augments. However, this grows tired if over-used and you should try and restrict repeated use equipment used in this way to those items that are signature items for your PC.

Having inappropriate equipment can result in an action being treated as a Stretch (see below). We assume that listing an ability means that you have the necessary equipment for that ability: a doctor's bag, thieves tools, a Colt .45.

## 2.6 Wealth

In most settings, wealth is treated as just another ability you use to overcome obstacles. Your ability is not an objective measure of the size of your fortune, but instead indicates how well you solve problems with money and resources.

## 3. Character Creation

The first step in creating your character is to come up with a concept that fits in with the genre of game that your GM intends to run. With that, you can assign abilities, ratings for those abilities, and if required flaws.

In addition, you will want to give your character a name, and provide a physical description. We recommend focusing on three physical things about your PC that others would immediately notice, over anything more detailed.

### 3.1 As-You-Go Method

#### 1. Concept

The concept is a brief phrase, often just a couple of words, that tells the GM and other players what you do and how you act. When in doubt, start with a noun or phrase indicating your profession or area of expertise, and modify it with an adjective suggesting a dominant personality trait:

- haughty priestess
  - hotshot lawyer
  - naïve warrior
  - noble samurai
  - remorseful assassin
  - sardonic ex-mercenary
  - slothful vampire
2. Now provide your character with a name.
  3. If the series uses other keywords, such as those for culture or religion, you may use one for free.
  4. When events in the story put you in a situation where you want to overcome an obstacle, make up an applicable ability on the spot. The first time you use an ability (including the two you start play with), assign an ability rating to it. This may be a breakout ability from a keyword. You are restricted to only one Sidekick.
  5. If you want, describe flaws.
  6. Once you have 12 abilities (including the two for character concept), and up to three flaws you are done creating your character.

### 3.2 Assigning Ability Ratings

You have now defined your abilities. These tell everyone what you can do. Now assign numbers to each ability, called ratings, which determine how well you can do these things.

Assign a starting rating of 17 to the ability you find most important or defining. Although most players consider it wisest to assign this rating to their area of expertise, which is also often a keyword, you don't have to do this. All other abilities start at a rating of 13.

Now spend up to 20 points to boost any of your various ability ratings, including keywords. Each point spent increases a rating by 1 point. You can't spend more than 10 points on any one ability.

Some genre packs may require you to have additional keywords that reflect the setting. These additional keywords come from the 12 ability allowance, so in many genres you will have fewer wildcard abilities but better fit the setting.

### 3.3 Keywords

You may build your PC around one or more keywords. A keyword gives you a package deal: you get a number of abilities by selecting a pre-existing character concept, which the player then modifies.

Keywords are best suited for use as the PC's core area of expertise.

In certain genres, you may require multiple keywords: for example, one for area of expertise, another for species or culture, and perhaps a third for religious affiliation.

Here are two ways to handle keywords. If in doubt, choose Umbrella.

**Keywords as Packages:** Treat keywords simply as shorthand for a package of abilities. These can be boosted together during character creation, but are too unrelated to increase together during a game. You are still free to use the keyword as an ability, and in fact may prefer to write only the specific abilities they've improved on their character sheet.

**Keywords as an Umbrella:** Treat keywords both as raisable abilities and as a collection of more specific abilities. This approach keeps the character sheet from getting too cluttered but encourages specialization. You write specialized abilities under the keyword, along with how much they've improved them:

In some settings, an ability may be listed in more than one of a PC's keywords. Choose only one to detail it under.

we refer to specialized abilities under a keyword as break-out abilities.

### 3.3 Flaws

You may assign up to three flaws to their PC. Common flaws include:

- Personality traits: surly, petty, compulsive.
- Physical challenges: blindness, lameness, diabetes.
- Social hurdles: outcast, ill-mannered, hated by United supporters.

Flaws are assigned a rating equivalent to the your abilities. The first flaw is rated at the highest ability, the second shares the same rating as the second-highest ability, and the third equals the lowest ability.

Certain keywords include flaws. Flaws gained through keywords do not count against the limit of three chosen flaws. All flaws after the third are given the same rating as the third ability. You may designate flaws from keywords as your first or second-ranked flaw. When flaws manifest during play, your GM places you in a contest against them, and rolls their associated ability ratings as Resistances to the your efforts. This method applies to flaws that primarily present you with additional obstacles to overcome.

Your GM may decide during play that certain flaws are better expressed as penalties to your attempts to overcome other resistances. Divide the value by 5 and round (a flaw of 19 imposes a  $-4$  penalty). This is appropriate where the player specifies that your ability to solve problems drops under certain specific conditions. Examples might include:

- Tongue-tied in large gatherings.
- Lousy with a stick shift.
- Can't stand snakes.

## 4. Simple Contests

Simple contests are the default resolution method for all story obstacles.

### 4.1 Simple Contest

#### 4.1.1 Procedure

1. Your GM frames the contest.
2. You choose a tactic, and figure your PC's target number (TN) using the ability rating and any modifiers. The PC's TN is the rating of their ability, plus or minus modifiers the GM may give you.
3. Your GM determines the resistance. If two PCs contend, your opponent figures their TN as described in step 2.
4. Roll a d20 to determine your degree of success or failure, then apply any bumps. Your GM does the same for the resistance. Compare your rolled number with your TN to see how well you succeeded or failed with your ability. Remember to apply any bumps from masteries or hero points.
5. Determine victory or defeat
6. Describe the result based on the story obstacle.

### 4.2 Group Simple Contest

In the Group Simple Contest, multiple participants take part in a simple contest. Each of you in your group conducts an individual simple contest against the GM, and the results for each side are collated to determine the victor.

A Group Simple Contest may pit all of you against a single resistance, representing one obstacle. Alternatively, a group simple contest may be a series of paired match-ups between two groups of contestants. If you are forced to participate in more than one contest, then you face the standard multiple opponent penalties.

### 4.2.1 Procedure

1. Your GM frames the contest.
2. You choose a tactic, and figure your PC's target number (TN) using the ability rating and any modifiers. Your TN is the rating of their ability, plus or minus modifiers the GM may give you.
3. Your GM determines the resistance. If two PCs contend, your opponent figures their TN as described in step 2.
4. For each of your group, roll a d20 to determine your degree of success or failure, then apply any bumps. Your GM does the same for the resistance. Compare your rolled number with your TN to see how well you succeeded or failed with your ability. Remember to apply any bumps from masteries or hero points.
5. Determine the number of Outcome Points (OPs) scored by the victor in the contest from the Group Simple Contest Results table. On a tie the victory goes to the Better Roll.
6. Sum the OPs gained for each side.
7. The side with the highest number of OPs is the victor in the contest.
8. Describe the result based on the agreed prize.

### 4.2.2 Group Simple Contest Resource Points

#### GROUP SIMPLE CONTEST RESULTS TABLE

Roll	Critical	Success	Failure	Fumble
Critical	1	2	3	5
Success	2	1	2	3
Failure	3	2	1	2
Fumble	5	3	2	0

## 6. Relationships

Abilities may represent your relationship to NPCs.

### 6.1 Supporting Characters

Many relationships connect you to NPCs controlled by the GM.

When you try to use one of these relationships to solve a problem, your tactic is your relationship ability. You can't simply go to the supporting character you have a relationship with, stick them with the problem, and expect to see it solved.

If you succeeds, the supporting character helps you solve the problem. If you fail, they don't. As with any ability, you must still specify how the NPC goes about overcoming the obstacle. Calls on relationships are almost always simple contests.

In crucial situations, it may seem dramatically inappropriate for you to solve a problem indirectly, by working through others. Your GM can expose the supporting character to serious risk. If the character dies or otherwise suffers a change of status that renders him useless to you, you permanently lose the relationship ability.

Before putting supporting characters at serious risk, your GM should make sure the players understand the magnitude of the possible consequences.

When supporting characters undertake significant risk, the supporting character may suffer a consequence of defeat commensurate with the level of the defeat in the contest. Or it may simply be your relationship that is damaged or destroyed.

## **6.2 Allies**

An ally is a character of roughly the same level of accomplishment as you, often in the same or a similar line of work. For every favor you ask of them, they'll ask one of you. These reciprocal favors will be roughly equivalent in terms of risk, time commitment, difficulty, and inconvenience.

## **6.3 Patrons**

Patrons enjoy greater access to resources than you, either through personal ownership (as in a Merchant Prince) or authority (as in the governor of a province). They may lend you advice or provide them with resources but are too busy and important to personally perform tasks for you. They may hire you to do jobs, or issue orders within a command structure to which you both belong.

When a you rolls your Patron relationship, your GM adjusts the difficulty depending on what the you have done for them lately.

## **6.4 Contacts**

A contact is a specialist in an occupation, skill, or area of expertise. Contacts provide your information and perform minor favors, but will expect information or small favors from you in return.

You can describe a contact as being a particular individual, or as a group of similar individuals.

### **6.4.1 Occupational Contacts**

Any occupational keyword can be treated as a source of contacts. However, using an occupational keyword as a source of contacts will always be a stretch. To more reliably draw on particular contacts associated with a profession, you should take an explicit ability.

## **6.5 Followers**

A follower is a secondary character that travels with you and contributes on a regular basis to your success.

There are two types of followers: sidekicks and retainers.

Followers need not be people, or even sentient beings: you can write up a spirit guardian, trusty robot, or companion animal as a follower.

### **6.5.1 Sidekick**

A sidekick is a secondary character under the your control. Most of the time they stays at your side to render assistance, but they can also go off and perform errands or missions on their own.

You should give their sidekick a name. You should, when asked, explain how the sidekick came to be the your follower, and why they continues in that role.

Sidekicks start with three abilities, one rated at 16 and the others at 13. Any of these abilities may be a keyword. At least one of them should indicate a personality trait.

If the sidekick is nonhuman or a member of an unusual culture, one of its three starting abilities must be its species or culture keyword.

Once you have determined the sidekick's base abilities, they allocate 15 additional points between three of them, spending no more than 10 on any one ability.

You can improve these abilities through the expenditure of Hero Points.

You may use any of your sidekick's abilities as your own. The companion can go off and do things without you.

### **6.5.2 Replacing Lost Sidekicks**

As a consequence of defeats in which they participated, sidekicks can be killed or leave your service permanently.

Defeat in physical contests can lead to literal death. Metaphorical deaths from non-violent contests indicate a break you. The sidekick may angrily withdraw from your service, but is more likely to sorrowfully retire. You may be able to bring a sidekick back from metaphorical death by overcoming story obstacles.

If you lose a sidekick, they may create a new one without needing to spend a Hero Point. You must explain how the new sidekick has come to be your new follower.

You may find it convenient to promote retainers to sidekick status, giving them names and personalities, with a sudden boost in abilities and ratings to match.

### **6.5.3 Retainers**

A retainer is a more or less anonymous servant or helper. You may specify a single retainer, or, where appropriate to your character concept, an entire staff of them.

Like any other ability, a retainer ability allows you to overcome relevant obstacles by engaging in a contest. To model the contribution of retainers, when you are acting, you can use them to augment your ability. Your GM can rule that consequences of defeat apply to retainers.

Retainers generally regard you with all the affection and loyalty due to an employer or master. If you treat them more poorly than is expected for their culture, your GM should increase the difficulty level of attempts to make use of their talents.

If you lose retainers for any reason, you can replace them simply by providing a convincing explanation of how you go about it.

## **6.6 Relationships as Flaws**

Certain relationships with supporting characters act as flaws. They impose obligations on you, prompting your GM to present you with obstacles you have no choice but to overcome.

### **6.6.1 Dependents**

A dependent is a person, usually a family member or loved one, who requires your aid and protection. Your GM should periodically create storylines in which your dependent is endangered.

Rather than taking a dependent as a flaw, you may find it more fruitful to specify the nature of your relationship as an ability, such as Love for Wife or Love for Son.

### 6.6.2 Adversaries

An adversary is a rival, enemy or other individual who can be relied upon to periodically disrupt your plans.

The adversary's goals are probably the opposite of yours, although they could be a bitter rival within the same community, organization, or movement.

To treat an adversary as an ability, rather than a flaw, describe your emotional response to them. Examples: Hates Leonard Crisp, Fears the Electronaut, Sworn Vengeance Against Heimdall. That way, you still inspire your GM to add the plot elements you desire, but can use your antipathy toward the enemy to augment your target numbers against them.

## 7. Hero Points

Hero points are a resource that you must carefully allocate. They allow you to heighten your victories and dull your defeats. They are the price you pay to improve your abilities over time.

### 7.1 Gaining Hero Points

You get 3 hero points at the beginning of every session. During the session, all Hero Points must be spent, either on improving contest results or character improvement. At the end of the session, unspent points are lost.

### 7.2 Improving Your Character

We present two approaches to improvement, your GM will choose one. Improvements happen at the end of a session.

#### 7.2.1 Quick Improvements

You may improve any ability by 1 point per session, at a cost of 1 hero point.

It costs 1 Hero Point to raise a single breakout ability under the keyword, or 2 points to raise the entire keyword or runic affinity by a point.

You can add a new ability by spending 1 point; it begins with a rating of 13.

You can add a new breakout ability by spending 1 point; it begins with a rating of +1 to the keyword it modifies

### 7.2.2 Optional: Story-based Improvements

Story-based improvements allow you either cement a Benefit of Victory or add a new ability with a rating of 13.

The cost to cement a Benefit of Victory is 1 point for Fresh, 2 points for Pumped, and 3 points for Invigorated. You cannot cement a Heroic Benefit of Victory. Once the bonus is cemented the ability is permanently raised by the given amount. You can only spend points to cement the whole Benefit not a part of it. For example, if your PC has is Pumped on their Avenge my Father ability of 3M, you can spend 2 points to cement the benefit and make your ability 9M, but you cannot spend 1 point to increase your ability as though it were Fresh to 6M.

Once your GM rules that a Benefit has expired, you may no longer cement it.

You must provide a story-reason why the experience has led to you learning something that improves your ability. The main reason for this is to prevent you seeking out weak resistances just to improve your PC. Your GM must genuinely feel that this was a moment where we see your hero grow as a result of their experience.

Your GM may decide that the Consequences of Defeat are sufficiently dire that they are permanent. Your GM may decide story logic dictates your setback is so dire that time itself will not erase the penalty. For example, in a sword-fight you might have suffered a permanent injury, a relationship may be permanently damaged, your actions might be forgiven but never forgotten. To cement a Consequence your GM must give you 1 Hero Point for a Hurt, 2 points for Impaired, 3 points for Injured. For obvious reasons, your GM cannot cement a Dying consequence.

### 7.3 Catch-Ups

A package deal, called a catch-up, applies whenever you acquire a new mastery; up to three abilities or keywords of your choice also increase by 3 points apiece. Only abilities or keywords with values 5 or more points behind your newly adjusted rating in the raised ability qualify for a catch-up.

You can't raise abilities under a keyword, nor gain a catch-up when the effective value of a breakout ability reaches a mastery (since it's the keyword, not the abilities under it, which has a rating).

### 7.4 Directed Improvements

On occasion your GM may increase one of your abilities, by +3, +6 or +9, or give you a new ability, usually rated at 13. These are called directed improvements.

Directed improvements are usually rewards for overcoming particularly important or dramatic obstacles. They happen immediately, rather than at session's end.

Your GM will tend to use them to raise abilities that would otherwise fall behind, but should increase due to story logic, or introduce new abilities for the same reason.

## 9 Appendix

### Version Changes

#### Version 2.2

- Uses of he/she changed to they/their
- Flagged some rules that are not required, as optional to allow those using the SRD to safely omit them if not required.
- Clarified that contest results are only reciprocal between PCs. When the contest is against a resistance set by the GM, the results indicate whether the PC gains the prize, and the GM narrates the result for the resistance based on this.
- Rephrased the contest results to emphasize: Yes, No, And..., But..., This change is designed to dissuade GMs from misunderstanding that the prize is obtained on a marginal victory, one of the most common result types, and instead encourage GMs to allow PCs to fail forward on such a result by introducing downstream complications.
- Provided clarity that consequences of defeat and benefit of victory are optional and the GM should focus on using the prize to narrate the outcome of a contest, only applying mechanical benefits if they make sense.
- Specific Ability Bonuses are dropped. They were hard for the GM to adjudicate and the same intent is better served by using a stretch on a broad ability when contesting against a PC with a more specific ability.
- A winning group in a Group Simple Contest does not suffer a Consequence of Defeat as a result of a low RP difference victory any more, the GM should narrate consequences from the level of victory, if appropriate.
- Dropped the negative consequences for the winner in an Extended Contest during the Rising Action. If the winner is a PC the degree of success already suggests consequences in addition to the prize on a marginal victory. So this rule is over-complication.
- Made it clear that only a PC should use a parting shot, not the resistance.
- Switched to addressing you the player, using your GM for the Games Master, and we for the game authors
- Long contests include both extended contest and scored contests. Between 1 and 2 extended contests switched to scored contests, this approach re-

stores both variants, but requires changing the generic name to a long contest.

- Added alternate mechanisms for determining if resistance advances and when
- Added story-based resistance mechanics
- Added story-based improvements
- Added States of Fortune to mirror States of Adversity. Overall mirrored benefits and consequences more closely
